MGC Micro Gold — Short

29 July 2026 · 01:45 – 01:50

BEFORE — AT ENTRY, 01:47

AFTER — 02:05

WHY I TOOK IT

Liquidity grab short. The 01:20 candle spiked to 4,030.30, took the liquidity above the highs, then closed straight back under the descending trendline off the 23:00 high. Shorted the retest at 4,022.

WHY I EXITED

Coming up on the 1-hour close and the 5-minute wasn't driving into it. Closed by hand rather than wait for the stop or target.

P&L

-\$19.80

NOTES

- Stop was never hit — price got no closer than 4,025.70.
- Target was hit about 15 minutes later, on the very next candle.
- Held to plan this was +\$268.20.

MNQ Micro Nasdaq — Long

29 July 2026 · 23:12 – 23:15

BEFORE — AT ENTRY, 23:12

AFTER — PRICE THROUGH THE STOP

WHY I TOOK IT

Anticipating a morning star reversal on the 30-minute after the drop off 27,800. Entry was a buy stop above price at 27,600.25 — wanted the push to come to me rather than catching the knife.

WHY I EXITED

Closed by hand on the way through, above the stop, rather than wait to see if it held.

P&L

-\$112.50

NOTES

- Exited 7.75 points above the stop — price went on to trade through it.
- Getting out early saved roughly \$31 compared to letting the stop hit.
- Dipped a further ~150 points before the reversal came, then ran well past target.

LEFT ON THE TABLE

Not missed trades — trades that were taken and closed by hand. What each one actually made, against what holding to plan would have made.

HOLDING TO PLAN,
ACROSS BOTH
TRADES, WOULD
HAVE NET

+\$257.00 more

Trade 0001 — MGC Short

CLOSED	-\$19.80	
HELD TO PLAN	+\$268.20	
DIFFERENCE	+\$288.00	holding would have been better

Trade 0002 — MNQ Long

CLOSED	-\$112.50	
HELD TO PLAN	-\$143.50	
DIFFERENCE	-\$31.00	closing early was better

SO FAR

Out early on both trades. Once it cost \$288.00. Once it saved \$31.00.
