**Appendix:** Assumptions Register · Sources & References

**How to read this report.** All figures are stated in Indonesian Rupiah (IDR), with US Dollar (USD) and, where useful, Australian Dollar (AUD) equivalents. Every model is built on an explicit *Assumptions Register* (Appendix A). Three scenarios — **Conservative**, **Realistic** and **Optimistic** — are carried through the financials. Where 2026 market data was sourced, citations appear as superscript markers<sup>[n]</sup> linked to the reference list in Appendix B. Figures without a citation are the analyst's modelled estimates derived from the cited inputs and standard industry benchmarks, and should be treated as informed assumptions rather than quoted prices.

# 1. Executive Summary

This study assesses the commercial feasibility of establishing a **premium scooter (motorbike) rental business in Canggu, Bali**, targeting long-stay tourists, digital nomads and mid-to-upper-tier visitors who value reliable, well-maintained machines, free delivery, transparent insurance and professional service. The analysis covers market conditions, a full fleet and maintenance cost model, four fleet-size revenue scenarios (10, 25, 50 and 100 scooters), three financial scenarios, a new-vs-used purchasing analysis, operations, risk and a staged growth roadmap to 250+ units.

## 1.1 Overall business viability

Bali's two-wheel rental market is large, structurally growing and underpinned by record tourism — **6.95 million foreign arrivals in 2025, up 9.7% year-on-year<sup>[3]</sup>** — but it is also **highly fragmented, price-competitive and partially informal**. Most demand is met by small, low-overhead operators renting directly to tourists. The opportunity for a new entrant is therefore **not to compete on price, but to formalise and professionalise**: a compliant PT PMA structure, premium fleet, fixed-location plus delivery model, digital booking, GPS-tracked anti-theft and genuine insurance/damage-protection products. The business is **viable, but margins are scale-dependent**: marginal-to-loss-making at 10 units, clearly profitable at 50+ units.

## 1.2 Headline figures (Realistic scenario, steady-state Year 2)

Table 1.1 — Summary economics by fleet size (Realistic scenario, mixed new/used fleet)

| Metric                                     | 10 scooters | 25 scooters | 50 scooters | 100 scooters |
|--------------------------------------------|-------------|-------------|-------------|--------------|
| Startup capital required (IDR)             | 460 M       | 990 M       | 1,870 M     | 3,620 M      |
| Startup capital (USD)                      | \$28.2k     | \$60.7k     | \$114.7k    | \$222k       |
| Annual revenue (IDR)                       | 330 M       | 825 M       | 1,650 M     | 3,300 M      |
| EBITDA (IDR)                               | 25.5 M      | 252 M       | 479 M       | 941 M        |
| EBITDA margin                              | 7.7%        | 30.5%       | 29.0%       | 28.5%        |
| Net profit after tax (IDR)                 | −9.5 M      | 132 M       | 244 M       | 473 M        |
| Net profit (USD)                           | −\$0.6k     | \$8.1k      | \$15.0k     | \$29.0k      |
| Return on invested capital (net)           | neg.        | 13.3%       | 13.0%       | 13.1%        |
| Cash payback (incl. depreciation add-back) | >8 yrs      | ~4.5 yrs    | ~4.5 yrs    | ~4.5 yrs     |

**Estimated capital required:** IDR 990 M–1,870 M (USD ~\$61k–\$115k) for a viable 25–50 scooter launch.

**Expected profitability (Realistic, 50 units):** ~IDR 479 M EBITDA / IDR 244 M net profit per year (~29% / ~15% margins).

**ROI:** ~13% net return on invested capital at steady state (Realistic); ~20–24% in the Optimistic scenario.

**Break-even:** ~62–66% fleet occupancy at the 50-unit scale; first-year operational break-even typically in months 8–11.

**Cash payback:** ~4.5 years on a cash basis (net profit + depreciation), ~6–7 years on a strict net-profit basis.

### 1.3 Break-even analysis (summary)

At 50 scooters, fixed and semi-fixed annual costs (staff, premises, software, marketing, compliance) total ~IDR 948 M. With a contribution margin of ~IDR 28.6 M per scooter per year at full utilisation, the fleet covers fixed costs at approximately **33 fully-utilised-equivalent scooters**, i.e. ~66% blended occupancy. Below this the business loses money; above it, incremental occupancy is highly profitable because the cost base is largely fixed. This operating leverage is the central financial dynamic of the business.

### 1.4 Key risks and opportunities

| Top risks                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Top opportunities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"><li>• <b>Regulatory:</b> 2025–26 crackdowns and a proposed ban on renting directly to tourists<sup>[8]</sup></li><li>• <b>Theft &amp; non-return</b> of vehicles (high-value maxi scooters)</li><li>• <b>Accidents &amp; liability</b> (inexperienced foreign riders)</li><li>• <b>Market saturation</b> &amp; price competition from informal operators</li><li>• <b>Tourism shocks</b> (pandemic, economic, natural disaster, AUD/IDR FX)</li></ul> | <ul style="list-style-type: none"><li>• <b>Formalisation premium:</b> compliant, insured, branded service in a largely informal market</li><li>• <b>Long-stay / digital-nomad monthly rentals</b> — stable, high-occupancy demand</li><li>• <b>Bundled insurance/damage protection</b> &amp; accessories upsell (high margin)</li><li>• <b>B2B channels:</b> villas, hotels, co-working spaces, relocation agents</li><li>• <b>GPS + digital contracts</b> reduce theft/fraud losses below market norms</li></ul> |

### 1.5 Final recommendation

**Proceed — but launch at scale and formalise from day one.** A 10-unit operation is not recommended as a standalone investment: PT PMA compliance overhead overwhelms the revenue base. The recommended entry point is a **50-scooter mixed fleet (≈70% new, 30% lightly-used), launched on a phased basis starting at 25 units**, structured as a PT PMA, positioned as a premium/long-stay brand, with GPS tracking, digital contracts and genuine insurance products. Expected steady-state net return ~13% (Realistic) with upside to ~20%+. The decisive success factors are **occupancy management, theft control, and regulatory compliance**. The single largest external risk — the proposed restriction on renting to tourists — should be actively monitored and mitigated by building B2B/long-stay channels and a strong compliance posture before scaling beyond 50 units.

## 2. Market Research

### 2.1 The Canggu / Bali scooter rental market

Scooter rental is the default mode of independent transport for visitors to Bali and is among the island's highest-frequency tourist transactions. Canggu — a coastal area in Badung Regency encompassing Berawa, Batu Bolong, Pererenan and Echo Beach — is the epicentre of Bali's surf, café, co-working and digital-nomad culture, and has the island's highest concentration of long-stay foreign residents. This makes it the single best micro-market in Bali for **monthly** scooter rentals, which are more profitable and lower-churn than daily tourist rentals.

The market is **large but fragmented**. Supply ranges from individual locals renting one or two bikes, through villa/hotel concierge arrangements, to a handful of semi-professional fleets and aggregator platforms. Quality, maintenance standards, insurance and contractual protection vary enormously. Pricing is transparent and competitive: comparison platforms list 50+ shops in Canggu alone<sup>[2]</sup>.

### 2.2 Tourist numbers and seasonality

Bali recorded **6,948,754 direct foreign arrivals in 2025, +9.72% on 2024<sup>[3]</sup>**, continuing a strong post-pandemic recovery. Domestic tourism adds several million more. Australia is the largest source market (~1.63 M, ~23%), followed by India (~569k) and China (~537k)<sup>[3]</sup> — relevant because Australian and Indian visitors are high users of scooter rental.

Table 2.1 — Bali foreign arrivals: seasonality pattern (2025 actuals & indicative monthly index)

| Period               | Monthly arrivals        | Season                    | Demand index |
|----------------------|-------------------------|---------------------------|--------------|
| Jan–May 2025 average | ~528,976 <sup>[3]</sup> | Shoulder / mixed          | 95           |
| July 2025 (peak)     | 697,110 <sup>[3]</sup>  | High (Jul–Aug, EU summer) | 132          |
| August 2025          | 682,866 <sup>[3]</sup>  | High                      | 129          |
| December 2025        | 572,668 <sup>[3]</sup>  | High (Christmas/NY peak)  | 108          |
| Feb / low months     | ~470,000 (est.)         | Low (Feb, rainy)          | 82           |

**Seasonality implication:** demand peaks Jun–Sep and over Christmas/New Year; troughs in Feb–Mar (wet season). Daily-rental revenue is volatile across the year, which is precisely why a **monthly/long-stay-weighted book smooths occupancy** — digital nomads and long-stay residents are far less seasonal than holidaymakers. This study assumes a high-season occupancy of ~90% and low-season ~65%, blending to ~78% annual average in the Realistic scenario.

### 2.3 Competitor analysis

Table 2.2 — Competitor archetypes in Canggu

| Archetype                                              | Typical scale | Strengths                              | Weaknesses                                                                       |
|--------------------------------------------------------|---------------|----------------------------------------|----------------------------------------------------------------------------------|
| Informal local renters                                 | 1–10 bikes    | Lowest price, flexible, local          | Variable maintenance, no real insurance, no contracts, cash-only, theft exposure |
| Villa/hotel concierge                                  | 5–30 bikes    | Captive guests, convenience            | Markup, mixed quality, not core business                                         |
| Semi-pro fleets (e.g. branded Canggu shops)            | 30–150 bikes  | Delivery, newer bikes, online presence | Thin processes, inconsistent insurance, theft losses                             |
| Aggregator platforms (e.g. Vroam-style) <sup>[2]</sup> | Marketplace   | Demand aggregation, reviews            | Commission, commoditises price                                                   |

## 2.4 Indicative market pricing (Canggu, 2025–26)

Table 2.3 — Observed rental rates, Canggu<sup>[2][4][6]</sup>

| Segment                | Example models                    | Per day                 | Per month                 |
|------------------------|-----------------------------------|-------------------------|---------------------------|
| Standard 110–125cc     | Scoopy, Vario 125, Beat, Fazzio   | IDR 60k–100k (\$4–6.5)  | IDR 1.5–2.2 M (\$100–140) |
| Premium maxi 150–160cc | NMAX, PCX, Vario 160, Lexi, Aerox | IDR 150k–250k (\$10–16) | IDR 2.5–3.5 M (\$150–230) |
| Lifestyle/niche        | Vespa, classic, big-bike          | IDR 250k–600k+          | IDR 4–8 M+                |

## 2.5 Market saturation

The daily-tourist segment is **saturated and commoditised** — entering it on price is value-destructive. However, the market is **under-served on quality and trust**: consistent professional maintenance, genuine theft/damage insurance, transparent contracts, GPS security, English-language support and reliable delivery/collection. The **monthly/long-stay and B2B segments are comparatively under-supplied by professional operators**, which is where this business should concentrate.

## 2.6 Customer demographics & preferences

- **Primary:** 25–45 yo digital nomads & long-stay residents (1–6 month rentals); value reliability, delivery, monthly billing, app-based support.
- **Secondary:** 20–40 yo holidaymakers (Australia, Europe, India) renting daily/weekly; value price, convenience, helmets, insurance peace-of-mind.
- **Tertiary (B2B):** villas, boutique hotels, co-working spaces, surf camps, relocation agents.
- **Preferences:** well-maintained late-model bikes; included quality helmets & phone holders; free delivery to villa/co-working; clear damage/insurance terms; card & e-wallet payment; English support; GPS for security/recovery.

## 2.7 Industry trends (2026)

- **Regulatory tightening:** active police crackdowns in Canggu/Denpasar on helmets, STNK, IDP; a Governor proposal to bar tourists from renting directly from locals<sup>[8]</sup> — a potential *tailwind for compliant, formalised operators*.
- **Long-stay/nomad demand** structurally rising; monthly rentals increasingly dominant in Canggu.
- **Digitalisation:** online booking, e-contracts, e-wallet/card payment, comparison platforms.

- **Electric scooters** emerging but constrained by charging/range/resale; a niche to watch, not yet a core fleet decision.
- **Safety & insurance** rising as a purchase driver after high-profile accident coverage.

## 2.8 Differentiation opportunities

**Positioning:** "The compliant, premium, hassle-free way to ride Bali." Specific differentiators: (1) genuinely professional maintenance with documented service history; (2) included real damage-protection/insurance product with clear excess; (3) GPS-tracked fleet (security + recovery + lower losses); (4) digital check-in/out with photo damage logs; (5) free delivery/collection across Canggu; (6) monthly subscription product for nomads; (7) full legal compliance (PT PMA, STNK, tax-registered, helmets/IDP guidance) — directly de-risking customers against the 2026 crackdown.

### 3. Fleet Comparison — New vs Used

New prices below are **2026 on-the-road (OTR) figures specifically for Denpasar, Bali** (OTR includes BBN vehicle tax + registration — the true out-the-door cost), drawn from current Denpasar dealer listings<sup>[1]</sup>. The "New OTR (model)" column shows the value used in the financial model (typically the base/CBS variant suited to fleet use); the range column shows base-to-top variant. Used values reflect the Bali second-hand market<sup>[5]</sup> and run higher than Java due to logistics. All values in IDR millions unless noted. Resale values assume rental-grade usage (higher km, more wear) and sit *below* private-owner resale.

Table 3.1 — Purchase & resale, Denpasar OTR 2026 (IDR millions, rental-grade)

| Model                        | Class                   | New OTR (model) | OTR range (variants) | Used (1 yr) | Resale @1yr | Resale @2yr | Resale @3yr |
|------------------------------|-------------------------|-----------------|----------------------|-------------|-------------|-------------|-------------|
| Honda Beat 110               | Entry                   | 18.4            | 18.1–18.7            | 11.0        | 14.0        | 12.0        | 10.5        |
| Honda Scoopy 110             | Standard / retro        | 23.3            | 22.88–23.68          | 14.5        | 18.0        | 15.5        | 13.5        |
| Yamaha Fazzio 125            | Standard / retro-hybrid | 22.5            | 21.92–24.40          | 15.0        | 18.0        | 15.5        | 13.5        |
| Honda Vario 125              | Standard                | 25.5            | 24.41–26.50          | 15.0        | 19.5        | 16.5        | 14.5        |
| Honda Vario 160              | Premium                 | 28.0            | 26.80–29.50          | 19.0        | 22.0        | 19.0        | 16.5        |
| Yamaha Lexi LX 155           | Premium                 | 28.0            | 26.80–31.45          | 19.0        | 23.0        | 20.0        | 17.5        |
| Yamaha Aerox 155             | Sport maxi              | 29.5            | 28.12–33.00          | 19.0        | 22.5        | 19.5        | 17.0        |
| Yamaha NMAX 155              | Premium maxi            | 31.5            | 29.75–32.26          | 21.0        | 26.0        | 22.5        | 19.5        |
| Honda PCX 160                | Premium maxi            | 35.5            | 34.35–40.95          | 25.0        | 30.0        | 26.0        | 22.5        |
| Yamaha NMAX Turbo 155 (ref.) | Premium maxi            | 35.0            | 33.42–46.10          | 24.0        | 29.0        | 25.0        | 21.5        |

Denpasar OTR sourced from Zigwheels/Oto/Yamaha Bali dealer listings, 2026<sup>[1]</sup>. Ranges span base to top variant (e.g. CBS vs ABS, Standard vs Connected/Lux); rental fleets typically buy the base variant, except ABS is recommended on the premium maxi tier. Fleet buyers can usually negotiate ~3–7% below sticker on bulk orders. 3-year resale ≈ 55–62% of new OTR for quality Honda/Yamaha automatics —

strong value retention that materially supports rental-fleet economics; Honda retains value marginally better than Yamaha in Bali due to deeper parts/service penetration.

Table 3.2 — Operating & suitability profile

| Model      | Fuel econ. | Reliability | Parts avail. | Popularity | Lifespan* | Rental suitability                                  |
|------------|------------|-------------|--------------|------------|-----------|-----------------------------------------------------|
| Scoopy 110 | ~58 km/l   | ★★★★★       | Excellent    | Very high  | 5–7 yr    | Excellent — cheap, light, easy, low-risk            |
| Vario 125  | ~55 km/l   | ★★★★★       | Excellent    | Very high  | 5–7 yr    | Excellent — best all-round workhorse                |
| Vario 160  | ~47 km/l   | ★★★★☆       | Excellent    | High       | 5–6 yr    | Very good — premium upsell, agile                   |
| PCX 160    | ~45 km/l   | ★★★★☆       | Very good    | High       | 5–6 yr    | Good — premium/comfort, higher capex & theft target |
| NMAX 155   | ~43 km/l   | ★★★★☆       | Very good    | Very high  | 5–6 yr    | Very good — flagship premium, strong tourist demand |
| Fazzio 125 | ~52 km/l   | ★★★★☆       | Good         | Growing    | 5–6 yr    | Good — stylish differentiator for nomad market      |
| Lexi 155   | ~45 km/l   | ★★★★☆       | Good         | Moderate   | 5–6 yr    | Fair — capable but weaker resale/demand than NMAX   |

\*Economic rental lifespan before resale, not mechanical limit. ★ ratings are analyst assessments based on Bali parts/service penetration and field reliability reputation.

**Fleet recommendation:** Anchor the fleet on **Honda Vario 125 and Scoopy** (volume workhorses: cheap, reliable, ubiquitous parts, low theft value) supplemented by a **premium tier of Yamaha NMAX and Honda PCX/Vario 160** for upsell and the long-stay market. Avoid over-weighting expensive maxi scooters early — they raise capex, theft exposure and insurance cost.

## 4. Servicing & Maintenance

Bali labour and parts costs are low by global standards. Field practice is to service rental scooters roughly **every 2,000 km** (oil + inspection)<sup>[7]</sup>. This study assumes a high-utilisation rental fleet covering **~12,000 km/scooter/year** with disciplined preventative maintenance. Indicative component costs below draw on Bali service-cost references<sup>[7]</sup> and standard manufacturer intervals; premium maxi models (NMAX/PCX, liquid-cooled) cost ~15–20% more than standard air-cooled models.

Table 4.1 — Maintenance schedule & cost per item (representative 125cc automatic; IDR)

| Item                                                      | Interval                | Labour | Parts | Total/event | Downtime | Annual cost*   |
|-----------------------------------------------------------|-------------------------|--------|-------|-------------|----------|----------------|
| Engine oil change                                         | 2,000 km (~6×/yr)       | 25k    | 45k   | 70k         | 20 min   | 420k           |
| CVT / gear oil                                            | 4,000 km                | 15k    | 25k   | 40k         | 15 min   | 120k           |

| <b>Subtotal preventative maintenance / scooter / year</b> |                         |        |       |             |          | <b>2,660k</b>  |
| Unexpected repairs / accident wear buffer (~13%)          |                         |        |       |             |          | 340k           |
| <b>TOTAL annual maintenance / standard scooter</b>        |                         |        |       |             |          | <b>~3,000k</b> |

\*Annual cost = cost per event × events per year at 12,000 km/yr. Figures rounded.

Table 4.2 — Annual maintenance cost by class (high-utilisation rental fleet, IDR/scooter/yr)

| Class                                                  | Example                   | Preventative | Repairs buffer | Total / year  |
|--------------------------------------------------------|---------------------------|--------------|----------------|---------------|
| Standard 110–125cc                                     | Scoopy, Vario 125, Fazzio | 2,200k       | 300k           | 2,500k        |
| Premium 150–160cc                                      | Vario 160, Lexi           | 2,700k       | 400k           | 3,100k        |
| Premium maxi (liquid-cooled)                           | NMAX, PCX                 | 3,100k       | 500k           | 3,600k        |
| <b>Blended fleet average (used in financial model)</b> |                           | —            | —              | <b>3,000k</b> |

**Maintenance analysed independently of revenue (as requested).** The figures above are *pure servicing cost* — parts, labour and a repairs buffer. They deliberately **exclude the lost rental income** while a scooter is off the road. That foregone revenue is treated separately as an *opportunity cost*: at ~6 service events/year averaging ~0.5 day off-road each, plus larger services, a scooter loses roughly **5–8 rental-days/year** to scheduled maintenance (~IDR 0.5–0.8 M of foregone revenue at premium rates). This is captured in the revenue model via the occupancy assumption (max ~90–95%, never 100%), *not* in the maintenance cost line — keeping servicing cost and revenue cleanly separated.

# 5. Operating Costs

Costs are split into **one-off setup** and **recurring operating** costs. Recurring costs are shown for the recommended 50-scooter base case; per-fleet totals are in Section 7–8.

Table 5.1 — One-off setup & legal structure (IDR)

| Item                                            | Cost                              | Notes                                                                                                                                       |
|-------------------------------------------------|-----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| PT PMA establishment (notary, OSS, NIB, deed)   | 25–50 M <sup>[10]</sup>           | Via agent; sector-dependent                                                                                                                 |
| Legal/consulting, KBLI licensing, permits       | 20–35 M                           | Rental/transport KBLI codes, business licences                                                                                              |
| Minimum paid-up capital (PT PMA)                | IDR 2.5 B declared <sup>[9]</sup> | Reg. No.5/2025; largely deployed as working capital/fleet, not a sunk fee. Declaration on incorporation; deposited after bank account opens |
| Local nominee / ownership structuring (if used) | 15–40 M + annual                  | <i>Not recommended</i> — see note below                                                                                                     |
| Office/warehouse fit-out, signage, security     | 40–120 M                          | Scales with fleet                                                                                                                           |
| Initial branding, website, booking system setup | 25–45 M                           | One-off build                                                                                                                               |

**Ownership structure.** The compliant route is a **PT PMA** (foreign-owned LLC) holding the appropriate rental KBLI licence. The total investment plan must exceed IDR 10 B per KBLI (excluding land/building) and minimum paid-up capital is IDR 2.5 B (~USD 150k)<sup>[9]</sup> — note this capital is mostly *deployed into the fleet and working capital*, not lost. "Nominee" arrangements (using a local's name to hold assets) are common but **legally unenforceable and high-risk**; for an investment-grade, financeable business we recommend the PT PMA route and explicitly advise against nominee structures.

Table 5.2 — Recurring annual operating costs (50-scooter base case, IDR)

| Category                                                                                                                                                                                                                        | Annual                   | Notes                                            |

## 5.3 Staffing & wages (Badung/Canggu, 2026)

Table 5.3 — Staffing model by fleet size (monthly gross IDR / role; annual total)

| Role                            | Monthly | 10          | 25           | 50           | 100            |
|---------------------------------|---------|-------------|--------------|--------------|----------------|
| Owner/GM (drawing)              | 8–12 M  | owner       | —            | 1            | 1              |
| Operations manager              | 7–8 M   | —           | 1            | 1            | 1              |
| Mechanic / driver               | 4.5 M   | 1           | 2            | 5            | 10             |
| Senior mechanic                 | 6 M     | —           | —            | —            | 2              |
| Customer service / admin        | 4 M     | PT          | —            | 2            | 4              |
| In-house accountant             | 6 M     | —           | —            | —            | 1              |
| <b>Approx. annual wage bill</b> |         | <b>80 M</b> | <b>192 M</b> | <b>480 M</b> | <b>1,080 M</b> |

Badung regency minimum wage (UMK) is ~IDR 3.3–3.6 M/month in 2026; skilled mechanics and managers command a premium. Wage bill excludes owner's economic profit at 10-unit scale (owner-operated).

## 6. Insurance

Indonesian motor insurance is inexpensive but coverage is limited and exclusions matter — particularly for a **commercial rental fleet** ridden by foreign customers, a use-case many retail policies exclude. A layered programme is required.

Table 6.1 — Insurance layers, indicative annual premiums & structure (IDR)

| Cover                                         | What it protects                                      | Indicative premium                 | Notes / excess                                                            |
|-----------------------------------------------|-------------------------------------------------------|------------------------------------|---------------------------------------------------------------------------|
| Total Loss Only (TLO)                         | Theft or damage >75% of value <sup>[11]</sup>         | from ~250k/bike/yr <sup>[11]</sup> | Cheapest base layer; excess often nil but only pays on total loss         |
| Comprehensive (All Risk)                      | Accident, theft, fire, partial damage <sup>[11]</sup> | ~1.5–3% of value (300k–900k/bike)  | Excess ~IDR 300k/claim; commercial-use loading likely                     |
| Third-party liability (TPL)                   | Damage/injury to others                               | bundled / +100–300k                | Often capped; verify limits                                               |
| Fire & theft                                  | Fire, theft (sub-limit)                               | within TLO/comprehensive           | Anti-theft device may reduce premium                                      |
| Public liability (business)                   | Third-party claims vs the company                     | 5–20 M/yr                          | Recommended for formal operator                                           |
| Business / property insurance                 | Premises, equipment, stock                            | 5–15 M/yr                          | Fire/burglary of premises                                                 |
| Employee insurance (BPJS)                     | Mandatory staff health + employment                   | ~ up to 10–11% of payroll          | BPJS Kesehatan + Ketenagakerjaan — legally required                       |
| Customer Damage Protection (in-house product) | Caps customer liability for a daily fee               | revenue item, not cost             | Sold to customer (e.g. 20–50k/day) with stated excess; high-margin upsell |

**Recommended programme:** Comprehensive/All-Risk on premium maxi scooters (high value, theft targets); TLO + TPL on standard scooters; company Public Liability + Property cover; mandatory BPJS for staff; and an **in-house Customer Damage Protection product** (waiver-style) sold per rental with a clear excess (e.g. IDR 1–3 M). Blended insurance cost used in the financial model: **~IDR 800k/scooter/year**.

**Critical exclusions to manage:** riding without valid licence/IDP, no helmet, DUI, off-road/illegal use, and unauthorised commercial use — these void cover, so the customer contract must enforce licence/IDP capture and helmet use, and the fleet policy must explicitly permit commercial rental.

**Recommended providers / channels:** established Indonesian insurers (e.g. MSIG, Zurich, Sinarmas, ACA) for fleet motor and property/liability; specialist expat-facing brokers for English-language service and commercial-use endorsements; BPJS (government) for mandatory employee cover. Always confirm the policy *explicitly permits rental to foreign customers* — the most common gap.

## 7. Revenue Modelling

Revenue is modelled per scooter then scaled. The model reflects a **premium, long-stay-weighted book**: a majority of revenue from monthly rentals (stable, high occupancy) plus daily/weekly rentals at higher rates, plus ancillary income.

Table 7.1 — Per-scooter revenue build (Realistic scenario, mixed fleet)

| Driver                                     | Assumption         | Basis                                                                                               |
|--------------------------------------------|--------------------|-----------------------------------------------------------------------------------------------------|
| Blended effective daily rate (rented days) | IDR 105,000        | Mix of monthly (~85k/day equiv.) & daily/weekly (150k+) across standard & premium <sup>[2][4]</sup> |
| Annual average occupancy                   | 78%                | High season ~90%, low ~65%; long-stay smooths                                                       |
| Rented days / scooter / year               | 285 days           | $365 \times 78\%$                                                                                   |
| Core rental revenue / scooter / yr         | IDR 29.9 M         | $285 \times 105k$                                                                                   |
| Ancillary revenue / scooter / yr           | IDR 3.1 M          | Delivery, accessories, damage-protection, airport (~+10%)                                           |
| <b>Total revenue / scooter / yr</b>        | <b>IDR ~33.0 M</b> | <b>≈ USD 2,025</b>                                                                                  |

Table 7.2 — Occupancy & seasonality assumptions

| Season                | Months                   | Occupancy   | Rate index |
|-----------------------|--------------------------|-------------|------------|
| High                  | Jun–Sep, mid-Dec–mid-Jan | 88–92%      | 110        |
| Shoulder              | Apr–May, Oct–Nov         | 75–80%      | 100        |
| Low                   | Feb–Mar                  | 60–68%      | 90         |
| <b>Annual blended</b> | —                        | <b>~78%</b> | <b>100</b> |

Table 7.3 — Revenue by fleet size & scenario (IDR, steady-state annual)

| Scenario                                       | Rev/scooter | 10    | 25    | 50      | 100     |
|------------------------------------------------|-------------|-------|-------|---------|---------|
| Conservative (occ. ~66%, lower rates)          | 27.0 M      | 270 M | 675 M | 1,350 M | 2,700 M |
| Realistic (occ. ~78%)                          | 33.0 M      | 330 M | 825 M | 1,650 M | 3,300 M |
| Optimistic (occ. ~85%, higher rates/ancillary) | 39.0 M      | 390 M | 975 M | 1,950 M | 3,900 M |

### 7.1 Rental product mix & upselling

Table 7.4 — Pricing menu & ancillary products (recommended)

| Product                                              | Standard   | Premium maxi | Notes                                             |
|------------------------------------------------------|------------|--------------|---------------------------------------------------|
| Daily                                                | 90–110k    | 180–230k     | Best rate/day; for short trips                    |
| Weekly ( $\approx 6\times$ daily)                    | 500–650k   | 1.0–1.3 M    | Light discount                                    |
| Monthly (long-stay)                                  | 1.7–2.2 M  | 2.6–3.4 M    | Volume anchor; $\sim 70\%$ of book                |
| Delivery / collection                                | free–50k   | free–50k     | Free within Canggu as differentiator; fee outside |
| Damage protection / day                              | 20–35k     | 35–60k       | High-margin; caps customer liability              |
| Accessories (extra helmet, box, surf rack, raincoat) | 10–40k/day | 10–40k/day   | Surf racks especially popular in Canggu           |
| Airport transfer / one-way                           | 150–350k   | 150–350k     | Partner with driver network                       |

## 8. Financial Analysis

Full profit & loss by fleet size for the **Realistic** scenario (steady-state Year 2), followed by scenario sensitivity. Tax: Indonesian corporate income tax 22%; an effective ~20% is applied (small-business reliefs partly offset by non-deductibles). Models assume equity funding (no interest) unless stated.

Table 8.1 — Profit & Loss by fleet size (Realistic, IDR millions/year)

| Line                                           | 10           | 25           | 50             | 100            |
|------------------------------------------------|--------------|--------------|----------------|----------------|
| Revenue                                        | 330.0        | 825.0        | 1,650.0        | 3,300.0        |
| — Maintenance & parts (3.0 M/unit)             | 30.0         | 75.0         | 150.0          | 300.0          |
| — Insurance (0.8 M/unit)                       | 8.0          | 20.0         | 40.0           | 80.0           |
| — Vehicle tax/STNK + tracker SIM (0.45 M/unit) | 4.5          | 11.3         | 22.5           | 45.0           |
| — Ops fuel attributable                        | 2.0          | 4.7          | 10.0           | 20.0           |
| <b>Gross profit (pre-overhead)</b>             | <b>285.5</b> | <b>714.0</b> | <b>1,427.5</b> | <b>2,855.0</b> |
| — Staff wages                                  | 80.0         | 192.0        | 480.0          | 1,080.0        |
| — Premises / storage / parking                 | 36.0         | 48.0         | 90.0           | 168.0          |
| — Marketing                                    | 36.0         | 72.0         | 132.0          | 240.0          |
| — Software / website / payments                | 24.0         | 36.0         | 60.0           | 96.0           |
| — Accounting / compliance / legal              | 48.0         | 60.0         | 90.0           | 150.0          |
| — Utilities / internet / delivery / misc       | 36.0         | 54.0         | 96.0           | 180.0          |
| <b>EBITDA</b>                                  | <b>25.5</b>  | <b>252.0</b> | <b>479.5</b>   | <b>941.0</b>   |
| EBITDA margin                                  | 7.7%         | 30.5%        | 29.1%          | 28.5%          |
| — Depreciation (fleet, 3.5 M/unit)             | 35.0         | 87.5         | 175.0          | 350.0          |
| <b>EBIT (pre-tax)</b>                          | <b>-9.5</b>  | <b>164.5</b> | <b>304.5</b>   | <b>591.0</b>   |
| — Tax @ ~20%                                   | 0.0          | 32.9         | 60.9           | 118.2          |
| <b>Net profit after tax</b>                    | <b>-9.5</b>  | <b>131.6</b> | <b>243.6</b>   | <b>472.8</b>   |
| Net margin                                     | neg.         | 16.0%        | 14.8%          | 14.3%          |

### 8.1 Startup costs & capital expenditure

Table 8.2 — Startup capital by fleet size (IDR millions)

| Component                                           | 10         | 25         | 50           | 100          |
|-----------------------------------------------------|------------|------------|--------------|--------------|
| Fleet purchase (mixed, ~26 M/unit blended)          | 260        | 650        | 1,300        | 2,600        |
| Per-unit equipment (helmets, GPS, locks, box) 1.1 M | 11         | 28         | 55           | 110          |
| Fleet equipment subtotal incl. above in fleet line  | —          | —          | —            | —            |
| PT PMA + legal + licences (one-off)                 | 60         | 70         | 80           | 100          |
| Premises fit-out, signage, security                 | 40         | 80         | 150          | 300          |
| Branding, website, software setup                   | 29         | 42         | 65           | 110          |
| Working capital (≈3 months opex)                    | 60         | 120        | 220          | 400          |
| <b>Total startup capital</b>                        | <b>460</b> | <b>990</b> | <b>1,870</b> | <b>3,620</b> |
| In USD                                              | \$28.2k    | \$60.7k    | \$114.7k     | \$222k       |

Note: the IDR 2.5 B PT PMA minimum paid-up capital<sup>[9]</sup> is a regulatory *declaration* largely satisfied by deploying capital into the fleet and working capital over time; it is not an additional sunk cost on top of the table above, though it does set a practical floor that favours the 50–100 unit scale.

## 8.2 Returns, payback & break-even

Table 8.3 — Return metrics (Realistic)

| Metric                                     | 10    | 25      | 50      | 100     |
|--------------------------------------------|-------|---------|---------|---------|
| Net profit / startup capital (ROI)         | neg.  | 13.3%   | 13.0%   | 13.1%   |
| Operating cash flow (net profit + deprec.) | 25.5  | 219.1   | 418.6   | 822.8   |
| Cash payback (capital / op cash flow)      | >8 yr | ~4.5 yr | ~4.5 yr | ~4.4 yr |
| Strict payback (capital / net profit)      | n/a   | ~7.5 yr | ~7.7 yr | ~7.7 yr |
| Break-even occupancy                       | ~95%+ | ~58%    | ~66%    | ~66%    |

Note on payback: depreciation is a real economic cost (fleet must be replaced), so the "strict" payback is the more conservative truth; the "cash" payback reflects near-term liquidity and assumes resale proceeds fund fleet renewal. Reality sits between the two (~5–6 years) because resale recovers ~55–60% of fleet cost.

## 8.3 Sensitivity analysis (50-scooter base)

Table 8.4 — Net profit sensitivity, 50 scooters (IDR M/yr)

|           | Occ. 66% | Occ. 72% | Occ. 78% | Occ. 85% |
|-----------|----------|----------|----------|----------|
| Rate –10% | –12      | 52       | 115      | 190      |
| Base rate | 78       | 160      | 244      | 340      |
| Rate +10% | 168      | 268      | 372      | 490      |

The business is **most sensitive to occupancy and rate** (operating leverage), then to staff cost and theft losses. A sustained –10% rate *and* 66% occupancy pushes the 50-unit fleet to a small loss — defining the downside guardrail. Marketing effectiveness and long-stay mix are therefore the most important management levers.

## 8.4 Three-scenario summary

Table 8.5 — Scenario summary (50 scooters, IDR M/yr)

| Metric                  | Conservative | Realistic | Optimistic |
|-------------------------|--------------|-----------|------------|
| Revenue                 | 1,350        | 1,650     | 1,950      |
| EBITDA                  | 235          | 479       | 735        |
| Net profit after tax    | 63           | 244       | 430        |
| ROI (on ~1,870 capital) | 3.4%         | 13.0%     | 23.0%      |
| Cash payback            | ~7.5 yr      | ~4.5 yr   | ~3.1 yr    |

## 9. New vs Used vs Mixed Fleet Analysis

Table 9.1 — Strategy comparison (50-scooter fleet)

| Factor                 | All new                 | All used (1–2 yr)                | Mixed (≈70/30) — recommended |
|------------------------|-------------------------|----------------------------------|------------------------------|
| Fleet capital (IDR)    | ~1,500 M                | ~950 M                           | ~1,300 M                     |
| Annual depreciation    | High (~4.2 M/unit yr 1) | Low–moderate (~2.5 M/unit)       | Moderate (~3.5 M/unit)       |
| Maintenance / downtime | Lowest, predictable     | Higher, more unplanned           | Low–moderate                 |
| Reliability            | Best                    | Variable                         | Good                         |
| Customer perception    | Premium                 | Mixed/budget                     | Premium where it counts      |
| Resale value retention | Takes year-1 hit        | Already absorbed by prior owner  | Balanced                     |
| Long-term ROI          | Good if held 3 yr       | Highest %, but risk/quality drag | Best risk-adjusted           |

**Recommendation: a mixed fleet (~70% new, 30% lightly-used).** Buy **premium maxi scooters new** (reliability, image, theft-insurability, strong 3-yr resale) and source the **standard workhorse tier as 1-year-old used** (the steepest depreciation already absorbed by the first owner, while Bali parts/service keep them dependable). This minimises capital and depreciation drag without sacrificing the customer-facing quality that justifies premium pricing. Refresh the fleet on a rolling ~3-year cycle, funding replacements from resale proceeds.

## 10. Operational Systems

Table 10.1 — Recommended systems & processes

| Function                  | Recommendation                                                                                                                                          |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| Booking system            | Online booking engine (website + WhatsApp + platform listings); real-time availability calendar; deposit at booking                                     |
| Fleet management software | Dedicated rental/fleet SaaS tracking each VIN/plate: status, service history, km, location, contract, P&L per unit                                      |
| GPS tracking              | Hardwired GPS tracker on every unit (esp. premium); geofence alerts, immobiliser on maxi scooters, recovery support — single biggest theft-loss reducer |
| Customer contracts        | Bilingual digital contract; captures passport, licence + <b>IDP</b> , signature, T&Cs, damage/insurance terms, helmet acknowledgement                   |
| Damage inspections        | Time-stamped photo/video check-in & check-out (app); shared with customer; disputes resolved against record                                             |
| Digital check-in/out      | QR/app flow; e-signature; photos; odometer; fuel level; deposit hold release                                                                            |
| Payment collection        | Card + e-wallet (GoPay/OVO/QRIS) + bank transfer; minimise cash; auto-recurring billing for monthly customers                                           |
| Deposits                  | Card pre-auth or cash deposit (IDR 1–3 M) OR damage-protection product in lieu; never hold passports                                                    |
| Fraud prevention          | ID + selfie verification, deposit pre-auth, GPS, blacklist sharing, chargeback-resistant payment flows, booking-pattern checks                          |
| Theft prevention          | GPS + immobiliser, quality disc/chain locks issued, customer education, geofencing, insurance, secure overnight storage                                 |
| Customer support          | WhatsApp-first, English-speaking, ~12–14h coverage; roadside assistance & swap-bike SLA                                                                 |
| Delivery & collection     | Scheduled free delivery within Canggu; driver app with routes; check-in completed at handover                                                           |

## 11. Risk Assessment & Mitigation

Table 11.1 — Risk register

| Risk                                                    | Likelihood | Impact | Mitigation                                                                                                                                            |
|---------------------------------------------------------|------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| Theft / non-return                                      | Med–High   | High   | GPS + immobiliser, deposits/pre-auth, ID verification, comprehensive/TLO insurance, secure storage, geofencing, blacklist                             |
| Accidents / injury & liability                          | High       | High   | TPL + public liability cover, mandatory helmets, IDP/licence enforcement, safety briefing, damage-protection product, clear contract                  |
| Customer damage                                         | High       | Med    | Photo check-in/out, deposit/pre-auth, damage-protection upsell, defined excess, repair-cost schedule                                                  |
| Weather / wet season                                    | High       | Med    | Long-stay mix smooths seasonality; raincoat upsell; low-season promotions; flexible cost base                                                         |
| Tourism downturn / shock                                | Low–Med    | High   | Long-stay/nomad & B2B base; lean fixed costs; ability to downsize fleet via resale; cash reserve                                                      |
| Regulatory change (rental ban/crackdown) <sup>[8]</sup> | Med        | High   | Full PT PMA compliance; B2B & long-stay channels less exposed than tourist-direct; monitor policy; relationships with associations; pivot-ready model |
| Competition / price war                                 | High       | Med    | Differentiate on quality/trust/compliance not price; brand; loyalty; B2B contracts; monthly lock-in                                                   |
| Currency (AUD/IDR, USD/IDR)                             | Med        | Med    | Costs & most revenue in IDR (natural hedge); price foreign-paid products dynamically; hold reserves                                                   |
| Fraud (chargebacks, fake ID)                            | Med        | Med    | Pre-auth, verification, chargeback-resistant flows, documentation, deposits                                                                           |
| Mechanical failure / downtime                           | Med        | Med    | Preventative maintenance, in-house workshop, spare/swap bikes (~5% buffer fleet), quality models, service records                                     |

**Single most important risk to monitor:** the proposed restriction on tourists renting bikes directly from locals<sup>[8]</sup>. If enacted, it could *favour* licensed corporate operators (a tailwind) — but the form of any regulation is uncertain. Mitigate by being demonstrably compliant, diversifying into B2B/long-stay (less exposed than walk-up tourist rental), and keeping the fleet liquid (resaleable) so the business can contract quickly if needed.

## 12. Growth Strategy (10 → 250+ scooters)

Table 12.1 — Staged scaling roadmap

| Stage         | Fleet | Structure & staffing                                             | Infrastructure                                               | Financing                                                  | Focus                                                          |
|---------------|-------|------------------------------------------------------------------|--------------------------------------------------------------|------------------------------------------------------------|----------------------------------------------------------------|
| 1 — Pilot     | 10–25 | Owner-operated + ops mgr + 2 mechanic/drivers                    | Small secure premises + workshop corner                      | Founder equity                                             | Prove unit economics, build reviews, refine ops                |
| 2 — Establish | 50    | + GM, 5 mechanic/drivers, 2 CS                                   | Dedicated warehouse + workshop + delivery vans               | Equity + reinvested profit; possible bank/asset finance    | Brand, B2B contracts, systems maturity                         |
| 3 — Scale     | 100   | + senior mechanics, in-house accountant, dedicated marketing     | Larger warehouse, satellite pickup points                    | Reinvestment + debt/asset finance; investor round optional | Process automation, multi-channel demand                       |
| 4 — Expand    | 250+  | Department heads (ops, finance, marketing, fleet); area managers | Multiple locations (Seminyak/Uluwatu/Ubud), central workshop | Debt facility / institutional investor / franchise         | Multi-location, possible car/villa adjacency, brand leadership |

Key scaling principles: (1) **don't scale ahead of occupancy** — add bikes only when existing utilisation >80%; (2) **systems before size** — fleet software, GPS and standardised maintenance must be solid before 50 units; (3) **fund fleet growth partly from resale** of the rolling 3-year replacement cycle; (4) **geographic expansion** (Seminyak, Uluwatu, Ubud) only after Canggu operations are repeatably profitable.

## 13. Final Recommendations & 12-Month Implementation Plan

---

### 13.1 Verdict & key parameters

- **Commercially viable?** Yes, at scale ( $\geq 50$  units). Marginal at 25, loss-making at 10 due to fixed compliance overhead.
- **Recommended fleet composition:** 50 scooters, ~70% new / 30% lightly-used, mix of ~60% standard (Vario 125, Scoopy, Fazzio) and ~40% premium (NMAX, PCX 160, Vario 160).
- **Recommended brands/models:** Honda Vario 125 & Scoopy (volume), Yamaha NMAX & Honda PCX 160 / Vario 160 (premium upsell); Yamaha Fazzio as a stylish differentiator.
- **Estimated startup capital:** IDR ~1,870 M (~USD \$115k) for 50 units; phase via 25 units (~IDR 990 M) first.
- **Expected annual profit (Realistic, 50 units, steady state):** ~IDR 244 M net (~USD \$15k); EBITDA ~IDR 479 M; ROI ~13% (upside to ~23%).
- **Pricing strategy:** premium-but-fair; anchor on monthly long-stay; avoid the bottom of the daily market; monetise damage protection, delivery and accessories.
- **Competitive advantages:** compliance, professional maintenance, GPS security, genuine insurance, digital experience, delivery, English support, B2B relationships.

### 13.2 Key success factors

- Maintain **occupancy** >75% via long-stay/B2B demand and marketing — the dominant profit driver.
- Keep **theft & damage losses** low via GPS, deposits, verification and insurance.
- **Regulatory compliance** as both a shield and a marketing asset.
- Disciplined **preventative maintenance** to maximise uptime and resale value.
- Tight **fixed-cost control** given the operating-leverage profile.

### 13.3 Common mistakes to avoid

- Launching sub-scale (10 units) and being crushed by compliance overhead.
- Competing on price against informal operators.
- Over-buying expensive maxi scooters (capex, theft, insurance drag).
- Relying on a nominee structure instead of a proper PT PMA.
- Skipping GPS/insurance to save cost — one theft can erase a unit's annual profit.
- Holding passports as deposit (illegal/reputational) instead of pre-auth/deposit/damage-protection.
- Ignoring licence/IDP capture — voids insurance and invites regulatory penalties.
- Scaling the fleet ahead of demonstrated occupancy.

### 13.4 12-month implementation plan

Table 13.1 — First-year roadmap

| Month | Milestones                                                                                                                                                                                               |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1–2   | Engage corporate/legal advisor; begin PT PMA incorporation, KBLI licensing, bank account; finalise business plan & funding; secure premises (lease + deposit).                                           |
| 2–3   | Premises fit-out, workshop, signage, security/CCTV; select & configure booking + fleet + payment software; build website & brand; set up insurance programme; recruit ops manager + 2 mechanic/drivers.  |
| 3–4   | Procure initial 25 scooters (mixed new/used); fit GPS trackers, boxes, locks, helmets, branding; register STNK; load fleet into software; create contracts & SOPs (check-in/out, maintenance, delivery). |
| 4–5   | <b>Soft launch (25 units).</b> List on platforms; begin SEO/ads; outreach to villas, hotels, co-working & surf camps; onboard first long-stay customers; collect reviews.                                |
| 5–7   | Optimise pricing/occupancy; refine maintenance cadence; tune marketing channels by ROI; build B2B contract base; hit ~70%+ occupancy.                                                                    |
| 7–9   | Evaluate unit economics vs model; if occupancy >80%, order second tranche (+25 units) to reach 50; hire additional staff (CS, mechanic/drivers).                                                         |
| 9–11  | Scale to 50 units; expand delivery capacity; formalise damage-protection & accessories upsell; implement loyalty/referral; first management accounts review & tax compliance check.                      |
| 11–12 | Year-1 review: P&L vs plan, theft/damage loss ratio, occupancy, NPS/reviews; set Year-2 plan; assess path to 100 units and financing options; institute rolling 3-year fleet-refresh policy.             |

**Bottom line:** A professionally run, compliant, premium scooter rental business in Canggu is a viable investment delivering ~13% net ROI in the Realistic case (with ~23% upside), *provided it launches at sufficient scale (target 50 units, phased from 25), maintains >75% occupancy, and rigorously controls theft and compliance risk.* The greatest external uncertainty is regulatory; the greatest internal lever is occupancy. Both are manageable with the strategy set out in this report.

## Appendix A — Assumptions Register

| Parameter                             | Value          | Source / basis                              |
|---------------------------------------|----------------|---------------------------------------------|
| FX: USD/IDR                           | 16,300         | Mid-2026 assumption                         |
| FX: AUD/IDR                           | 10,700         | Mid-2026 assumption                         |
| Bali foreign arrivals 2025            | 6.95 M (+9.7%) | BPS / ANTARA <sup>[3]</sup>                 |
| Annual blended occupancy (Realistic)  | 78%            | Modelled from seasonality <sup>[3]</sup>    |
| Blended effective daily rate          | IDR 105k       | Canggu market rates <sup>[2][4]</sup>       |
| Revenue / scooter / yr (Realistic)    | IDR 33.0 M     | Modelled                                    |
| Maintenance / scooter / yr (blended)  | IDR 3.0 M      | Sec. 4, Bali service costs <sup>[7]</sup>   |
| Insurance / scooter / yr (blended)    | IDR 0.8 M      | Sec. 6 <sup>[11]</sup>                      |
| Depreciation / scooter / yr (blended) | IDR 3.5 M      | ~3-yr hold, 55–60% resale <sup>[1][5]</sup> |
| Annual km / scooter                   | 12,000 km      | High-utilisation assumption                 |
| Blended fleet purchase / unit         | ~IDR 26 M      | Mixed new/used <sup>[1][5]</sup>            |
| Corporate tax (effective)             | ~20%           | CIT 22% w/ small-biz relief                 |
| PT PMA min paid-up capital            | IDR 2.5 B      | Reg. No.5/2025 <sup>[9]</sup>               |

Figures are estimates for planning; actuals vary by negotiation, supplier, location and timing. Conduct independent due diligence and obtain professional legal, tax and insurance advice before committing capital.
