

TOOK -\$19.80 -0.15R	WOULD HAVE MADE +\$273.00 +2.1R at target	SWING -\$292.80 taken + left behind	RISK ON \$129.00 never got close
----------------------------	---	---	--

Where I got in01:47

What it did after02:05

Short at the trendline after the 01:20 spike swept the highs. Stop above at 4,026.20, target below at 4,012.90.

ENTRY	STOP	TARGET	R:R
4,022.00	4,026.20	4,012.90	2.1 : 1

WHY I GOT IN
Liquidity grab. The 01:20 candle spiked to 4,030.30, took the highs, then closed straight back under the trendline. Shorted the retest at 4,022. 4,026 was old support that had already broken.

WHAT I WANTED
Roll back down through 4,014-4,016 and take out the 23:30 low at 4,013.60.

WHERE I'D MANAGE IT · HOW I FELT
Didn't write one. Panicky — funded account sitting near break-even.

One candle. 4,021.50 down to 4,012.90, low of 4,010.80 — straight through target, five minutes after I was out.

EXIT	HIGH AFTER	STOP HIT	LOW
4,022.65	4,025.70	No, by 0.50	4,010.80

WHY I GOT OUT
1-hour close coming up and the 5-minute wasn't driving into it. Protecting capital.

WHAT HAPPENED
It went, on the very next candle. Ran 2.10 points past target. The stop was never in danger — price topped out half a point short of it.

THE BIT WORTH NOTICING
Got in off the 30-minute. Got out off the 5-minute. Different timeframe from the one the trade was built on.

THE NEGATIVE STAT

Closed early, before stop or target	1 of 1	-\$292.80
Moved a stop to break-even	0 of 1	
Stopped out — idea actually wrong	0 of 1	
Let the plan finish	0 of 1	

THE TOTAL

Realised	-\$19.80
Left on the table	-\$273.00
Swing against plan	-\$292.80
Setups that worked	1 of 1

THE SIX QUESTIONS

1 Punted out of boredom?	NO	2 Sized up after losers?	NO	3 Binned something on a small sample?	NO
4 Impressed by someone's weekly %?	NO	5 Got out on feel, not on the chart?	YES	6 Stop to break-even to be safe?	NO

Number 5. The stop was 4.20 points away and never got within 0.50 of being hit. Closed it on how it felt with the hourly coming, not on anything the 30-minute had done.
